DAY-5

CONFIGURATION USING YAML

✅ Changing Server Port Using `application.yaml` (Correct Way)

```
# application.yaml
server:
  port: 8081
```

❌ Wrong Ways (Do NOT Do These)

❌ Incorrect Indentation

```
server
 port: 8081   # ❌ Wrong indentation, will cause parsing errors
```

❌ Using `=` Instead of `:`

```
yaml
CopyEdit
server=8081   # ❌ YAML does not support '=' for key-value pairs
```

❌ Adding Port as a String (Unnecessary)

```
yaml
CopyEdit
server:
  port: "8081"  # ❌ Port should be a number, not a string
```

❌ Putting Comments in the Wrong Place

```yaml
CopyEdit
server:
  port: 8081 #Change port   # ❌ Avoid inline comments without proper spacing
```

📌 Do's and Don'ts Summary

✔️ ✅ Always maintain correct **indentation** (2 spaces per level)

✔️ ✅ Use `:` for key-value pairs, **not** `=`

✔️ ✅ Port should be a **number**, not a string

✔️ ✅ Place comments **above the line**, not inline without space

✔️ ✅ Use `application.yaml` or `application.yml` in `src/main/resources/`
